Nelson, Pope & Voorhis completes over 50 Phase II Environmental Site Assessments (ESA) every year in locations from Montauk to Manhattan and throughout the Tri-State Area. Phase II ESA's performed by NP&V involve a variety of sampling techniques and mediums including: hand auger and Power Probe soil and groundwater sampling, Ground Penetrating Radar (GPR), Photo Ionization Detection of field samples, methane monitoring, groundwater monitoring, determination of groundwater flow direction and all phases of site investigation and cleanup. Based on the results of Phase II ESA investigations, numerous site remediations have been completed under our supervision and in coordination with County, State and Federal environmental and health agencies. Over the years, NP&V has established an excellent working relationship with personnel of these agencies. This relationship allows us to obtain direct input from the regulatory agencies to promptly and properly coordinate and implement complex sampling and remedial tasks. We look forward to designing a program that fits your needs.
