Nelson, Pope & Voorhis owns and operates specialized equipment for subsurface geophysical investigations. Staff members have received specialized training in the operation of the firm's Power Probe subsurface drilling and sampling unit. The Power Probe unit allows NP&V personnel to obtain soil and groundwater samples from various depths, install wells, conduct soil borings; complete soil-gas vapor surveys and related field work. The Power Probe has both direct push and auger capabilities situated on an MT52 Bobcat base that is only 36 inches wide, allowing for passage through regular doorways

The data collected from the Power Probe can be reviewed by the operator and office personnel and incorporated into required investigative reports.

The equipment is invaluable in allowing NP&V to conduct Phase II site assessments and other subsurface investigations. NP&V has performed numerous investigations using the equipment to arrive at environmental solutions on behalf of municipal and private clients.
