NP&V performs air monitoring for a variety of project types. Personnel are OSHA 40-hour HAZWOPER trained and conduct all forms of environmental sampling. NP&V has performed soil-gas monitoring for volatile organic compounds originating from dry cleaners and industrial plumes and is well-versed in the use of timed intake canisters for sample collection, and collection of ambient control and source samples needed to determine potential exposure concerns with respect to soil-gas vapors. The firm has performed air monitoring for arsenic and pesticides during construction in connection with several sites developed or under construction for residential use. Monitoring is critical with respect to worker exposure, and potential area impacts.
