Sustainability and energy efficiency in development are becoming more important to developers, occupants and the general public, in consideration of not only economics, but for environmental and health reasons. In addition, as we grow in our understanding of the implications of an ever-increasing demand for energy, the impacts on our economy and climate will be reduced if we as a society implement sustainable practices in development. NP&V is equipped to help developers maintain economic health by reducing environmental footprint through sustainability and LEED project planning and support.
